GO Enrichment for DEGs at Gen2
muscle system process
import into cell
nucleoside-phosphate biosynthetic process...
intracellular mRNA localization involved...
endocytosis
establishment of mitochondrion localizat...
mitochondrial gene expression
assembly of actomyosin apparatus involve...
translational initiation
regulation of system process
larval development
positive regulation of intrinsic apoptot...
actomyosin contractile ring organization
regulation of cell projection assembly
positive regulation of signal transduct...
Biological Process
molar larval or pupal development
mitochondrial transport
tripartite regional subdivision
positive regulation of plasma membrane b...
cytokinetic process
embryonic development via the syncytial ...
ribose phosphate metabolic process
lamellipodium organization
intracellular mRNA localization
proton transmembrane transport
translational elongation
regulation of intrinsic apoptotic signal...
regulation of cellular response to stress...
developmental process involved in reprod...
positive regulation of endocytosis
